# Vishal

**AI Content Generation Artist | Generative AI Specialist | AI Quality & Evaluation Professional**
Chennai, India
5.5 Years at Amazon

---

## Professional Profile

AI professional with 5.5 years of experience across CVML, Generative AI, Alexa, Ring, and large-scale AI model evaluation workflows within Amazon. My work sits at the intersection of creativity and technical validation — generating AI-driven visual content while ensuring fidelity, realism, and production-grade quality standards.

I specialize in AI image generation and prompt engineering, generative image evaluation, CVML annotation workflows, RLHF (Reinforcement Learning from Human Feedback), SFT (Supervised Fine-Tuning) data models, and structured quality review processes.

I have contributed to multiple enterprise AI systems, including the NOVA model (now launched), supporting evaluation, validation, and continuous model refinement initiatives.

---

## Core Expertise

### 1. AI Content Creation & Prompt Engineering

- AI image generation for product and scene-based outputs
- Structured prompt refinement to reduce regeneration cycles
- Producing aesthetically controlled outputs for scalable content production
- Maintaining visual consistency across categories while adapting to specific requirements
- Balancing creative styling with technical realism

---

### 2. CVML & Visual Intelligence Workflows

- CVML annotations for training computer vision models
- Facial recognition workflow evaluation and validation

- Ring project image validation and visual quality analysis
- Video retrieval accuracy checks
- Multi-category annotation pipelines requiring precision and speed

I have supported multiple internal customers across CVML, ML, AI, Alexa, and Ring ecosystems within Amazon.

---

**3. AI Model Training Support**

- Reinforcement Learning from Human Feedback (RLHF)
- Supervised Fine-Tuning (SFT) data preparation and evaluation
- Model response grading and ranking
- Workflow-based AI feedback loops
- Human-in-the-loop evaluation systems

Through these processes, I have contributed to improving model intelligence, response accuracy, and system reliability at scale.

---

**4. Alexa & Conversational AI Systems**

- Worked on Alexa Assistant workflows
- Response evaluation and correction
- Validation of contextual accuracy and intent alignment
- Cross-functional collaboration to improve AI performance quality

---

**Leadership & Ownership**

While early in level, I have consistently taken ownership beyond my assigned scope of work:

- Guided colleagues across active workflows
- Supported onboarding and informal mentoring
- Took additional operational responsibilities during high-volume periods
- Contributed to process improvements

- Maintained quality while meeting productivity targets

I have built a reputation for reliability in fast-paced, production-driven environments.

---

**Technical Exposure**

- Internal AI image generation tools (confidential)
- Generative AI evaluation platforms
- Annotation and model validation systems
- Basic Python
- Excel (workflow tracking and metrics)
- Photography editing fundamentals (personal practice)

---

**Work Methodology (Creative + Technical Balance)**

My approach to AI content creation includes:

- Structured prompt engineering
- Controlled output generation
- Artifact detection and correction
- Iterative refinement
- Quality sign-off aligned with production standards

I focus on minimizing regeneration while maintaining high-fidelity output and efficiency.

---

**Impact & Contribution**

- 5.5 years contributing to large-scale AI production systems
- Exposure to launched enterprise models (including NOVA)
- Experience across multiple AI domains within one ecosystem
- Supported scalable content and model evaluation pipelines
- Consistent, quality-focused delivery in high-volume environments

---

**Closing Statement**

I’m passionate about working at the intersection of generative creativity and technical precision. With experience in CVML, AI image evaluation, RLHF, and generative systems, I focus not just on producing content — but on improving the systems behind it. I’m excited to continue growing in AI-powered content creation while contributing to teams building the next generation of intelligent visual systems. I would welcome the opportunity to discuss my experience further.
